## See What a Difference A NatureView Can Make

Enjoy the feeling of completeness and satisfaction on your selection of an enclosure system to allow the maximum protection from the elements and minimize the obstructions from your view with your selection of the NatureView.

Call one of our consultants today to discuss your best options. As with our standard screen room and patio enclosures, the NatureView is a fully engineered system that meets or exceeds building code requirements for any county across the country.

*What a difference!*

# NATUREVIEW

## *Screen System*

- Duracoat polyceramic finish in white, almond or bronze
- Concealed fasteners and connections
- Distinguished architectural design with round trim and elegant appearance
- Solid positive locking door system with spring loaded hinges

The NatureView is a collection of the finest quality products designed and produced in the USA. The beautifully crafted extrusion system, with its Perfect Fit Technology (PFT) is made from a premium grade aluminum. Can be installed as a screen room under an existing roof, under an Elite insulated roof system and as part of a pergola system. All with the unique NON exposed fastener design, the system creates the most timeless and sought after finish solution. In addition to being visually stunning because of the wide open views, it offers a complete versatility, ensuring it meets your functional and stylistic requirements.

Complimenting any architectural design - whether it is a Cape Cod home, a West Palm Beach mansion, or a beautifully designed condo - the NatureView is guaranteed to change the way a home is interacted with, enabling it to be enjoyed like never before.

The flawless connections and finish of the NatureView system is a thing of wonder. The secret behind this effortless smooth finish can be found in every section and connection. An intelligently engineered hidden connection bracket and a pressurized snap system ensures a longevity of structural integrity. The paint ensures long lasting finish.

## Quality That Can Be Seen, Felt and Admired

Inspired by color, with the finish available in bronze, white and almond, choose the color that suits your style. The finish is smooth to the touch and highly resistant to the elements. These are available on a never before seen lead time, allowing you to have the system installed in a very timely manner.

Customize your enclosure with all the little details ranging from a 1/4" to a 10" profile. No matter which setup you chose, you can be assured that the expanded view will create a sophisticated and timeless feel, helping maximize the natural flow of natural light into your home and maximize the view to the natural scenery outside your home.

## Life with No Boundaries

The slim sightlines and expanse of space offered by the NatureView can transform a home, removing the barrier between inside and out. The custom nature of every NatureView system means that you can select one of 6 designs, and still maintain a flawless transition.

## Keeping the Family Safe

Nothing is more important than safety and reliability in a home, which is why the NatureView system incorporates the Panorama and Vista door options. The Panorama door gives you a full unobstructed view while the Vista door has a mid rail option to broaden your design possibilities. Either design is one that all of the family can benefit from. The Panorama and Vista doors incorporate finger safe weatherization gaskets to prevent small children's hands from getting trapped when the door is closing. The spring loaded hinges assures a smooth and complete closure every time.

Height, width and profiles can be customized to your preferred design. Fasteners that hold the hinges in place are concealed. Because of the stringent quality control, Elite Aluminum has over all the elements (ie. aluminum checks, component performance and controlled factory settings for production) stress, worry and concern are replaced with complete peace of mind.
