

# DRIP EDGE FASCIA

Designed to blend with existing fascia and roof edge profiles, the Elite drip edge fascia finishes and protects the entire perimeter of your roof. It has been designed with a large receiving edge for easy installation. Drip edge fascia caps the panel edges to prevent moisture from siphoning into the roof system. A kick-out drip edge directs the water away from the fascia protecting your home from water damage.

Combining both drip edge and fascia, the Elite drip edge fascia is unique to the industry. This all-in-one product directs the water to drain directly into your gutters, and because it's a solid piece, water is prevented from getting behind the fascia.

Made from commercial grade extruded aluminum, Elite's drip edge fascia won't rust or corrode and its durability will provide years of dependable service.

One extrusion  
is all you need.
